1 - Overview

Our organization has adopted written Policies & Procedures that describe in detail the tasks that we have committed to undertake to fulfill our HIPAA compliance reporting requirements.

We start by performing a periodic Risk Analysis to identify threats and vulnerabilities to ePHI and the security of our networks and systems, in general. We then create a Risk Management Plan to prioritize remediation and ensure resolution of the issues identified in the Risk Analysis.

This document supplements the Risk Analysis and Risk Management Plan and offers substantiation and verification of policy compliance by providing confirmation of timely performance of recommendations detailed in the Risk Management Plan.

Security Officer

Name of Security Officer: Joe Secoff

Contact Information for Security Officer:
555 Hipaa Way
Hitech, CA 90022

2 - Overall Risk

2.1 - Overall Risk

We have performed a Risk Assessment as part of our routine HIPAA compliance review. See the attached [HIPAA Risk Assessment and Management Plan document](#).

The Risk Analysis is designed to accurately and thoroughly identify vulnerabilities and threats that impact electronic Protected Health Information (ePHI). The report is then used to assess the potential risks to the confidentiality, integrity and availability of ePHI located or held at our office.

The Risk Analysis follows industry best practice standards as described by HHS, NIST, ISACA, HIMSS or AHIMA organizations and performed no less than one time a year or after successful implementation of any major system change including an office relocation, replacement of EHR system containing PHI, etc.

3 - Environment

3.1 - Facility Access Controls

45 CFR §164.310(a)(1) - "Implement policies and procedures to limit physical access to its electronic information systems and the facility or facilities in which they are housed, while ensuring that properly authorized access is allowed."

We implement procedures that are designed to allow authorized access and deny unauthorized access, to and within facilities, to limit access to devices that can access or store ePHI.

Computers

During a physical walkthrough, we found some computers that did not have protection against theft in place.

Comments: Reception computer is not in a secure location. Patients can walk around and easily access the computer.

Data Storage Devices

During a physical walkthrough, we found some data storage devices that did not have protection against theft in place.

Comments: Flash drives lying on desks.

Public Viewable Screens

During a physical walkthrough, we did not find any screens that could potentially display ePHI viewable by the public.

Public Viewable Screens

During a physical walkthrough, we found some retired/decommissioned/failed systems or storage devices.

Comments: Dead computers on ground.

4 - Users

4.1 - Information System Activity Review / Unique User Identification

§164.308(a)(1)(ii)(D): Security Management Process - Implement procedures to regularly review records of information system activity, such as audit logs, access reports, and security incident tracking reports.

We employ the use of Windows Authenticated users as a means for unique user identification.

As part our regular review of system activity, we validate the list of current users and identify former employees and vendors who may still have access. This review involves looking at audit logs, access reports, and reviewing security incident tracking reports. During the review, generic accounts logins are also identified for further investigation. *See the User Identification Worksheet, User Behavior Analysis, and Login History by Computer Report*

	# Enabled Users	# Disabled Users
Employee - ePHI authorization	1	0
Employee - no ePHI authorization	47	30
Vendor - ePHI authorization	1	0
Vendor - no ePHI authorization	0	0
Former Employee	3	0
Former Vendor	1	0

Potential Generic Accounts found

Generic account logins were used on the following computers and should be investigated. The use of generic logins may prevent proper tracking and identification and is discouraged. There are legitimate uses for generic login, such as limited administrative access and use, as well as access to workstations where secondary logins are required to access ePHI. If access is deemed inappropriate, further action should be taken to ensure the situation is remediated.

Generic Account	First Name	Last Name	Computer	IP Address
Administrator	Administrator			
ASPNET	ASPNET			
DEV\$	DEV\$			
Guest	Guest			
IUSR_DC02	IUSR_DC02			
IUSR_STEINBRENNER	IUSR_STEINBRENNER			
IWAM_DC02	IWAM_DC02			
IWAM_STEINBRENNER	IWAM_STEINBRENNER			
netvendor	NETVENDOR			
SUPPORT\$	SUPPORT\$			
SUPPORT_388945a0	SUPPORT_388945a0			
TestV	TestV			

4.2 - Termination Procedures

§164.308(a)(3)(ii)(C): - Implement procedures for terminating access to electronic protected health information when the employment of a workforce member ends or as required by determinations made as specified in paragraph (a)(3)(ii)(b).

Former Employee and Form Vendors with Enabled Accounts
Terminated employees and vendors should have their accounts disabled to prevent potential unauthorized access to ePHI. The following active accounts designated as former employees or former vendors were identified. These accounts should be disabled or removed.

CORP.MYCO.COM

Username	Name	Status
kmayhem	Kevin Mayhem	Former Employee
mSUMMER	Mark SUMMER	Former Employee
Pkrickey	Paul Krickey	Former Employee
rtaylor	Rob Taylor	Former Vendor

Potential Former Employee and Form Vendors with Enabled Accounts
The following user accounts were found to not have user activity in the past 30 days and could be an indication of an account that should be disabled. Security exceptions for these accounts can be found in the [Security Exception Worksheet](#).

CORP.MYCO.COM

4.3 - Establish Clear Job Description and Responsibilities / Access Authorization

§164.308(a)(3) Implement policies and procedures to ensure that all members of its workforce have appropriate access to electronic protected health information, as provided under paragraph (a)(4) of this section, and to prevent those workforce members who do not have access under paragraph (a)(4) of this section from obtaining access to electronic protected health information.

The following are Network Shares that have been identified as having ePHI (see [Network Share Identification Worksheet](#)). They are listed below with their current security settings. Unrestricted shares, allowing access to Everyone, are marked in **RED BOLD**. Shares that allow access by a User identified as not having access to ePHI are flagged in **RED**. See the [Share Permission Report](#) and [Share Permission Report by User](#) for a detailed listing of network shares and their settings.

Permissions for Share with ePHI

Share	ePHI	Share Type	User/Group			Share Permissions
				Full Control	Change	Read
\\STORAGE01\Common (D:\Shared Files\Common)	Has ePHI	Disk	Everyone		✓	✓
			BUILTIN\Administrators	✓	✓	✓

File System Permissions for Share with ePHI

Share	Share Type	User/Group	File System Permissions	Type
\\DC01\C\$\br/>(C:\)	Special	CREATOR OWNER	Special (268435456)	Allow
		NT AUTHORITY\SYSTEM	FullControl	Allow
		BUILTIN\Administrators	FullControl	Allow
		BUILTIN\Users	AppendData	Allow
		BUILTIN\Users	CreateFiles	Allow
		BUILTIN\Users	ReadAndExecute, Synchronize	Allow
\\STORAGE01\Common (D:\Shared Files\Common)	Disk	CREATOR OWNER	FullControl	Allow
		NT AUTHORITY\SYSTEM	FullControl	Allow
		BUILTIN\Administrators	FullControl	Allow
		MYCO\Domain Admins	FullControl	Allow
		MYCO\Domain Users	FullControl	Allow
		MYCO\sboardroom	FullControl	Allow
		MYCO\RLindy	FullControl	Allow
		MYCO\dHAROLD	FullControl	Allow
		MYCO\kjames	FullControl	Allow
		BUILTIN\Administrators	FullControl	Allow
		MYCO\Domain Admins	FullControl	Allow
		CREATOR OWNER	FullControl	Allow
		NT AUTHORITY\SYSTEM	FullControl	Allow
BUILTIN\Users	CreateFiles, Synchronize	Allow		

Share	Share Type	User/Group	File System Permissions	Type
		BUILTIN\Users	AppendData, Synchronize	Allow
		BUILTIN\Users	ReadAndExecute, Synchronize	Allow

4.4 - Evaluate Existing Security Measures Related to Access Controls

§164.308(a)(4) Information Access Management - Implement policies and procedures for authorizing access to electronic protected health information that are consistent with the applicable requirements of subpart E of this part.

The policy and procedure related to authorizing access to ePHI is included with this assessment for reference.

Our employees have not yet received training on how to avoid becoming a victim of technology threats.

4.5 - Password Management

§164.308(a)(5)(ii)(d): Security Awareness and Training - Procedures for creating, changing, and safeguarding passwords.

Proper password management is vital for ensuring the security of the network. Password complexity and expiration policy should be enabled and enforced by Group Policy when possible.

Policy	Setting	Computers
Password Policy Consistency	Only 83% consistent (based on 2 computers sampled)	
Enforce password history	24 passwords remembered	DC01
	0 passwords remembered	TANDEM
Maximum password age	42 days	All Sampled
Minimum password age	1 days	All Sampled
Minimum password length	7 characters	All Sampled
Password must meet complexity requirements	Enabled	All Sampled
Store passwords using reversible encryption	Disabled	All Sampled

Proper account lockout policy settings will prevent both interactive and automated attempts to compromise passwords.

Policy	Setting	Computers
Account Lockout Policy Consistency	Consistent	
Account lockout duration	Not Applicable	All Sampled
Account lockout threshold	0 invalid logon attempts	All Sampled
Reset account lockout counter after	Not Applicable	All Sampled

Except for service accounts, all passwords for users that can potentially log in should be set to expire on a regular basis. The following users have passwords that are set to never expire:

Corp.MyCo.com

Administrator, ASPNET, BKRICKEY, byellin, bvinings, bgelding, bhanks, cwoods, dHAROLD, dbard, echristy, fthomas, Guest, HJoel, IUSR_DC02, IUSR_STEINBRENNER, IWAM_DC02, IWAM_STEINBRENNER, JDAVIS, JPoole, jpane, jterencel, kglass, kmayhem1, kjacobs, kjames, kmayhem, TWilliams, mparish, mgarrison, mSUMMER, mshoals, mELKINS, mMAYHEMON, mDAVIS, NetScanner, netvendor, pSIMPSON, Pkrickey, support, PGK Test1, QBDataServiceUser19, rjohnson, rphillis, rtaylor, RLindy, sRammond, smurray, SharePointSQL, sLOW, sboardroom, SUPPORT_388945a0, tHenderson, testuser, marcustest, TestV, thughes, wmathers, wparson

Local Account Password Analysis

This section contains the password strength analysis using MBSA to determine risk. Systems with security risks are highlighted in red.

IP Range for MBSA scan: 10.0.7.0-10.0.7.255

4.6 - Administrative Access Control

§164.312(a)(1) Access Control - Implement technical policies and procedures for electronic information systems that maintain electronic protected health information to allow access only to those persons or software programs that have been granted access rights as specified in §164.308(a)(4).

Automatic log off or lockout is required to be set on all computers. Lockout time should always be less than 15 minutes. In some circumstances, such as nearly publicly accessible or viewable computers, lockout time should be minimized as much as feasible.

Lockout Time (minutes)	# Computers	Computers
<=5	0	
<=10	0	
<=15	1	TANDEM
>15	0	
Not Enabled	1	DC01

4.7 - Audit Controls

§164.312(b) Audit Controls - Implement hardware, software, and/or procedural mechanisms that record and examine activity in information systems that contain or use electronic protected health information.

The following are the current Windows auditing configuration:

Policy	Setting	Computers
Audit account logon events	No auditing	All Sampled
Audit account management	No auditing	All Sampled
Audit directory service access	No auditing	All Sampled
Audit logon events	No auditing	All Sampled
Audit object access	No auditing	All Sampled
Audit policy change	No auditing	All Sampled
Audit privilege use	No auditing	All Sampled
Audit process tracking	No auditing	All Sampled
Audit system events	No auditing	All Sampled

4.8 - Person or Entity Authentication

§164.312(d): Person or Entity Authentication - Weigh the relative advantages and disadvantages of commonly used authentication approaches. There are four commonly used authentication approaches available: -Something a person knows, such as a password. -Something a person has or is in possession of, such as a token (smart card, ATM card, etc.). -Some type of biometric identification a person provides, such as a fingerprint. -A combination of two or more of the above approaches.

The use of various authentication mechanisms has both advantages and disadvantages. Use of at least one of the means of ensuring a secure authentication mechanism should be in place. A combination of multiple approaches may be desirable for increased security.

Password complexity required	No
Token-based Authentication	No
Biometric Authentication	None

The authentication mechanism in place may not be sufficient to prevent a breach. Immediate attention is required.

5 - Servers and Local Computers

5.1 - Protection Against Malicious Software

§164.308(a)(5)(ii)(B): Security Awareness and Training - Procedures for guarding against, detecting, and reporting malicious software.

Endpoint Security Summary

This section contains a listing of detected Antivirus, Antispyware, Firewall, and Backup information as detected through  *Security Center* and/or  *Installed Services* for major vendors, which is then categorized by domain membership.

Values in the "Name" column contain either the name of the product, **None** indicating the machine returned information but no product was found, or <empty> indicating information was not obtainable. Further, a status of  indicates "yes",  indicates "no", and <empty> indicates that a status was not available.

Endpoint Security Assessment

Automated detection was unable to be completed on 111 computers. The computers should be investigated to assure proper anti-virus and anti-spyware detection.

30 computers were detected as having no anti-virus or anti-spyware.

4 computers with active but out of date anti-virus or anti-spyware.

Security Patch Summary

This section contains the patching status of computers using MBSA to determine need. Computers with missing patches are highlighted in red.

IP Range for MBSA scan: 10.0.7.0-10.0.7.255

IP Address	Computer Name	Issue	Score	Assessment
10.0.7.10	MYCO\OPS001	Security Updates	Unable to scan	Cannot contact Windows Update Agent on target computer, possibly due to firewall settings.

10.0.7.90	MYCO\JOES-PC	Security Updates	Unable to scan	Cannot contact Windows Update Agent on target computer, possibly due to firewall settings.

Security Patch Assessment

Automated detection was unable to be completed on 15 computers. The computers should be investigated to assure the latest patches have been applied.

Security patches are missing on 6 computers. These patches should be applied as soon as possible to prevent or restrict the spread of malicious software.

5.2 - Applications and Data Criticality Analysis

§164.308(a)(7)(ii)-Assess the relative criticality of specific applications and data in support of other contingency plan components.

The following is an analysis of the environment looking for other areas where PHI may be found in order to identify the associated risks.

Copiers and Multi-function Printers

Our company uses copiers and multi-function printers.

Cloud-based EHR System

Our company uses a cloud-based EHR system.

5.3 - Business Associate Agreements for Cloud Servers and Data Centers

§164.308(a)(7)(ii)(A) - Establish and implement procedures to create and maintain retrievable exact copies of electronic protected health information. Contingency Plan §164.308(a)(7)(ii)(b) - Establish (and implement as needed) procedures to restore any loss of data.

Data Center

We host computers at an external hosted facility/data center that could possibly contain ePHI.

Contact Information: *None provided.*

We do not have a Business Associate Agreement with the Data Center.

Cloud Services

The following are identified Cloud Services that could potentially expose ePHI either visually or through data transmission.

Service	Computer	Explanation of Use	ePHI Risk	BA Agreement
LogMeIn	REX		Yes	
LogMeIn	TANDEM		Yes	
LogMeIn	MWEST-WIN864		Yes	
LogMeIn	PSIMPSON-WIN764		Yes	
LogMeIn	PSIMPSON1		Yes	
TeamViewer	TANDEM		Yes	
TeamViewer	sLOW-win7.corp.MyCo.com		Yes	
TeamViewer	PSIMPSON-WIN764		Yes	
TeamViewer	MARKETING-1		Yes	
TeamViewer	RANCOR		Yes	
TeamViewer	SE-DAVIS		Yes	
TeamViewer	PSIMPSON1		Yes	
ScreenConnect	JAGA		Yes	
ScreenConnect	STORAGE01		Yes	
ScreenConnect	REX		Yes	
ScreenConnect	BKRICKY-WIN7		Yes	
ScreenConnect	HV05		Yes	
ScreenConnect	HV02		Yes	
ScreenConnect	HV01		Yes	
ScreenConnect	HV04		Yes	
ScreenConnect	HV03		Yes	
ScreenConnect	DC01		Yes	
ScreenConnect	UTIL01		Yes	

6 - Firewall

6.1 - Access Authorization

§164.308(a)(4): Implement policies and procedures for granting access to electronic protected health information; for example, through access to a workstation, transaction, program, process, or other mechanism.

We employ an external firewall to prevent external attacks.

Models:

The external firewall does have an Intrusion Prevention System; however, it is not turned on.

6.2 - Protection Against Malicious Software

§164.308(a)(5)(ii)(B): Security Awareness and Training - Procedures for guarding against, detecting, and reporting malicious software.

The external firewall does not have Malware Filtering. The firewall may not be a commercial grade firewall and should be upgraded.

6.3 - External Vulnerability Scan

§164.308(a)(5)(ii)(B): Security Awareness and Training - Procedures for guarding against, detecting, and reporting malicious software.

As part of our routine procedure to ensure protection from external threats, we have conducted an external vulnerability scan. The following external IP addresses were scanned and accessed:

Host Summary

Host	Analysis	Open Ports	High	Med	Low	False	CVSS
5.23.4.133 (50-243-217-133-static.hfc.comcastbusiness.net)	Medium risk	5	0	2	2	0	6.9
Total: 1	Medium risk	5	0	2	2	0	6.9

The following high and medium issues were detected. In some cases, further investigation was performed and the risk was deemed a non-issue or false positive.

7 - Email

7.1 - Applications and Data Criticality Analysis

§164.308(a)(7)(ii)-Assess the relative criticality of specific applications and data in support of other contingency plan components.

Email is stored locally on the following computers that were marked as not having ePHI:

Computer	Mailbox Files	Verified No ePHI sent through Email Account
TANDEM	Outlook Data File - wparson@Excelsior.com.ost wparson@MyCo.com - wparson@MyCo.com.ost imap.googlemail.com.msf Archives.msf Drafts.msf Follow up.msf INBOX.msf Misc.msf Priority.msf Sent.msf Templates.msf [Gmail].msf All Mail.msf	

8 - Wireless

8.1 - Access Authorization

§164.308(a)(4): Implement policies and procedures for granting access to electronic protected health information; for example, through access to a workstation, transaction, program, process, or other mechanism.

The following wireless access points were detected. Highlighted entries are SSID published by our company. We discourage the use of all non-company wireless access points.

SSID	Secured	Security	Risk Level
<i>No wireless networks detected</i>			

Guest Wireless

We do offer guest wireless to visitors or patients.

Guest wireless is on the same network as ePHI.

8.2 - Access Establishment

§164.308(a)(4)(ii)(c) - Implement policies and procedures that, based upon the entity's access authorization policies, establish, document, review, and modify a user's right of access to a workstation, transaction, program, or process.

The wireless keys were last changed **25 days ago**.

8.3 - Workforce Security

§164.308(a)(3)(ii)(C): - Implement procedures for terminating access to electronic protected health information when the employment of a workforce member ends or as required by determinations made as specified in paragraph (a)(3)(ii)(b).

The wireless key has been changed since the latest high risk employee termination.
